

Change in hihi local hot spots 2005-2025

How the success of the number of fledglings raised per site has changed throughout the years

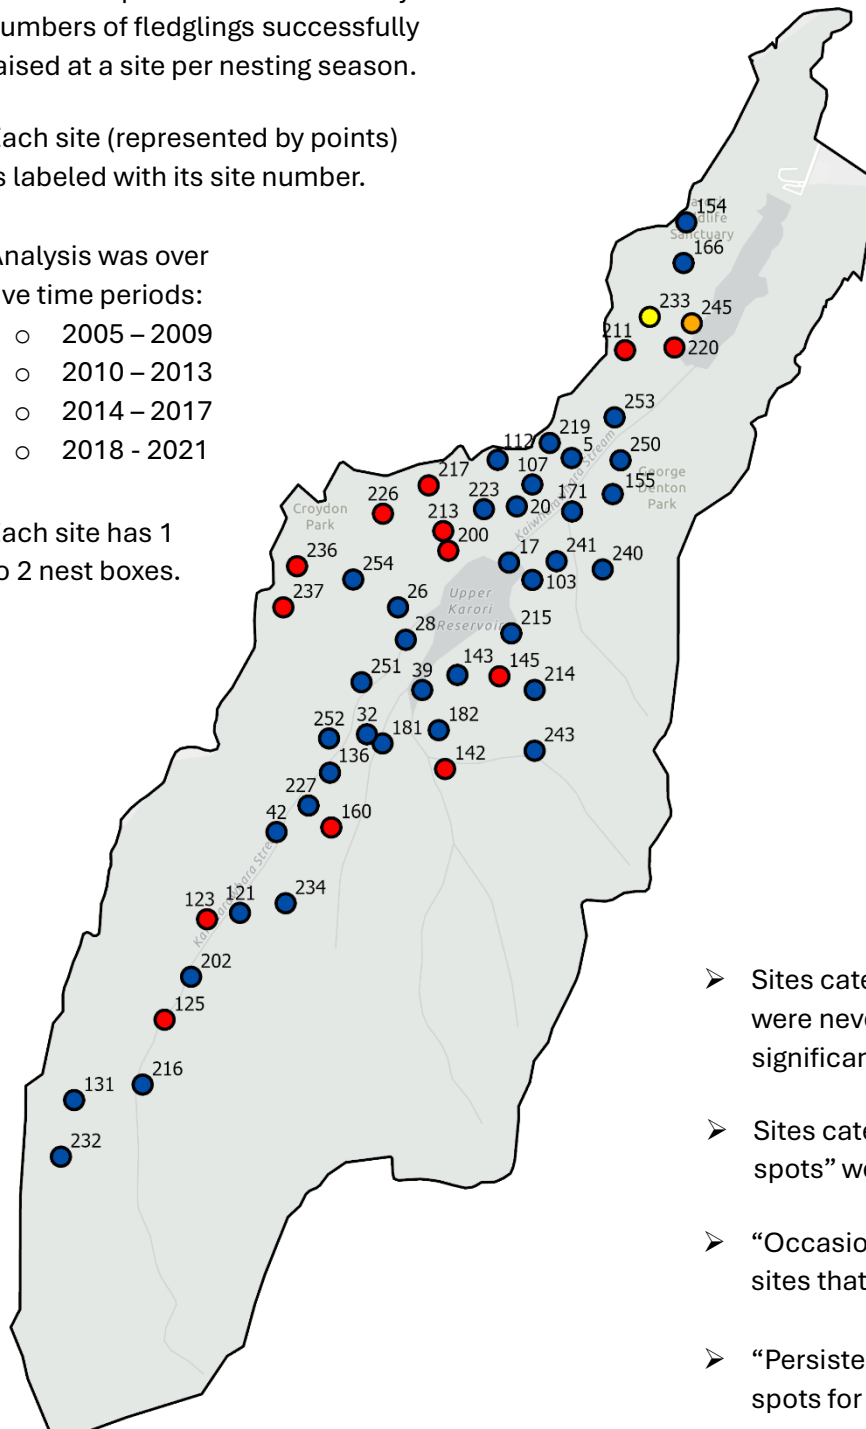

- Local hot spots are determined by the numbers of fledglings successfully raised at a site per nesting season.
- Each site (represented by points) is labeled with its site number.
- Analysis was over five time periods:
 - 2005 – 2009
 - 2010 – 2013
 - 2014 – 2017
 - 2018 - 2021
- Each site has 1 to 2 nest boxes.

N

Legend

- Never hot spot
- One-time hot spot
- Occasional hot spot
- Persistent hot spot

0 0,25 0,5 1 Kilometers

- Sites categorized as “Never hot spot” were never part of a statistically significant hot spot.
- Sites categorized as “One-time hot spots” were hot spots only once.
- “Occasional hot spots” were sites that were hot spots twice.
- “Persistent hot spots” were hot spots for three or more periods.
